The Department of Defense Dictionary of Military and Associated Terms can be found at http://webapp.icpsr.umich.edu/cocoon/ICPSR-STUDY/08942.xml. This collection provides average scores on selected variables from the Dictionary of Occupational Titles for 1980 Census occupational categories. The dataset was prepared using a sample of individuals from the 1970 Census whose occupations had been coded with both 1970 and 1980 Census detailed occupational codes. This file, known as the Treiman file, was merged with selected variables from the FOURTH EDITION DICTIONARY OF OCCUPATIONAL TITLES, using 1970 occupational categories as the merge variable. A score on each Dictionary of Occupational Titles (DOT) variable was then computed for each 1980 occupational category.

Included among the DOT variables were such characteristics as:
1. Level of complexity at work
2. Training required to do the job
3. Verbal, numerical, spatial, and other aptitudes needed to perform the job
4. Percent of workers in the job with a preference for a specific type of job activity such as abstract and creative activity or activity requiring business contact with people
5. Temperamental attributes such as adaptability to performing under stress and adaptability to performing repetitive work
6. Physical demands of the job
7. Environmental conditions under which the worker functions in terms of data, people, and things
8. Earnings and growth projections

This collection can be used for a variety of applications including job placement, occupational research, career guidance, labor market information, and curricula development, and long range job planning.
