Introduction to Community Development

The world’s poor will be the most critically affected by a changing climate—and yet their current plight isn't improving rapidly enough to fulfill the UN’s Millennium Development Goals. If experienced development organizations are finding it difficult to solve decades-old development problems, how will they additionally solve new challenges driven by climate change? This book illustrates how including community members in project design and co-management leads to long-lasting, successful achievement of development and adaptation goals. This field guide provides a system of building block activities for staff on the ground to use in developing and implementing successful adaptation to climate change projects that can be co-managed and sustained by communities. Based on years of use in 129 different countries, the techniques illustrated in this field guide use a step-by-step progression to lead readers through problem assessment, project design, implementation, and community take over. The book equips development staff with all the tools and techniques they need to improve current project effectiveness, to introduce community based adaptation into organizational programming and to generate new projects. The techniques provided can be applied to broad range of challenges, from agriculture and soil and water challenges, to health concerns, flood defences and market development. The book is supported by a user-friendly website updated by the author, where readers can download online resources for each chapter which they can tailor to their own specific projects. This practical guide is accessible to all levels of development staff and practitioners, as well as to students of development and environmental studies.

McKenzie’s an Introduction to Community & Public Health

If the body of knowledge of a profession is a living landscape of practice, then our personal experience of learning can be thought of as a journey through this landscape. Within Learning in Landscapes of Practice, this metaphor is further developed in order to start an important conversation about the nature of practice knowledge, identity and the experience of practitioners and their learning. In doing so, this book is a pioneering and timely exploration of the future of professional development and higher education. The book combines a strong theoretical perspective grounded in social learning theories with stories from a broad range of contributors who occupy different locations in their own landscapes of practice. These narratives locate the book within different contemporary concerns such as social media, multi-agency, multi-disciplinary and multi-national partnerships, and the integration of academic study and workplace practice. Both scholarly, in the sense that it builds on prior research to extend and locate the concept of landscapes of practice, and practical because of the way in which it draws on multiple voices from different landscapes. Learning in Landscapes of Practice will be of particular relevance to people concerned with the design of professional or vocational learning. It will also be a valuable resource for students engaged in higher education courses with work-based elements.

The Art of Community

This book presents a theory of learning that starts with the assumption that engagement in social practice is the fundamental process by which we get to know what we know and by which we become who we are. The primary unit of analysis of this process is neither the individual nor social institutions, but the informal ‘communities of practice’ that people form as they pursue shared enterprises over time. To give a social account of learning, the theory explores in a systematic way the intersection of issues of community, social practice, meaning, and identity. The result is a broad framework for thinking about learning as a process of social participation. This ambitious but thoroughly accessible framework has relevance for the practitioner as well as the theoretician, presented with all the breadth, depth, and rigor necessary to address such a complex and yet profoundly human topic.

Public Libraries and Their Communities

Desire lines are the paths that people create through regular usage. They appear where people repeatedly choose to walk and usually signify a route from A to B that’s quicker than the formal path provided. In most cases they indicate the mismatch between what local people want and what designers think people want. By employing some social research classics in the design development process, placemakers can work more meaningfully with local communities to meet their needs and aspirations. This is a practical guide to running public consultations, co-design and community engagement to help practitioners make the most of local knowledge and insight for the benefit of design. It offers guidance on managing community participation, and unapologetically aims to encourage designers to start thinking like social researchers when they undertake these programmes. It’s intended for placemakers - architects, urban designers, landscape architects, and other built environment professionals involved in the planning and design of public realm - who want to develop more people-centred, community-led design approaches.

An Introduction to Community Development

From the author of Small Change comes this engaging guide to placemaking, packed with practical skills and tools that architects, planners, urban designers and other built environment specialists need in order to engage effectively with development work in any context. Drawing on four decades of practical and teaching experience, the author offers fresh insight into the complexities faced by practitioners when working to improve the communities, lives and livelihoods of people the world over. The book shows how these complexities are a context for, rather than a barrier to, creative work. The book also critiques the single vision top down approach to design and planning. Using examples of successful professional practice across Europe, the US, Africa, Latin America and post-tsunami Asia, the author demonstrates how good policy can derive from good practices when reasoned backwards, as well as how plans can emerge in practice without a preponderance of planning. Reasoning backwards is shown to be a more effective and inclusive way of planning forwards with significant improvements to the quality of process and place. The book also offers a variety of methods and tools for analyzing the issues, engaging with communities and other stakeholders for design and settlement planning and for improving the skills of all involved in placemaking. Ultimately the book serves as an inspiring guide, and a distillation of decades of practical wisdom and experience. The resulting practical handbook is for all those involved in doing, learning and teaching placemaking and urban development world-wide.

Public Consultation and Community Involvement in Planning

"We need to do Community Involvement better – we know we’re spending millions each year on charitable causes; how can we find out what is really effective and what people will appreciate us for? Who should we partner with? How can we make a real difference in society and help our business? Companies around the world are trying to answer these questions. Many are asking the same questions even as, collectively, they continue to spend billions on their communities. How do they know which activities are really worthwhile? Building on the authors’ own extensive global experience at Nokia and E.ON, as well as the experience of many other experts in the field, this book offers the first-ever "how to" roadmap for managers on the comprehensive implementation of strategic Community Involvement inside their companies. It is designed to be practical, for those who want to act upon what they have read. It will fill a long-neglected niche as a day-to-day reference guide for practitioners. Corporate Community Involvement demonstrates what to do and how to do it. The advice is backed up by inspiring interviews with best-in-class practitioners from businesses such as Microsoft, GlaxoSmithKline, Ericsson, and Deutsche Bank and leading international Corporate Responsibility and Community Involvement experts. The book highlights proven best-practice approaches, effective methods, and concise tools to help managers “get there faster” and “get it right first time.” The core of the book is a step-by-step guide to developing and implementing a comprehensive and successful approach to Corporate Community Involvement. It shows how to: conduct a current state analysis and devise a strategy, organize staffing and budgets, integrate Corporate Community Involvement throughout the business and create high-profile programs, partner across sectors, measure and evaluate results, communicate successful activities, and overcome challenges. Corporate Community Involvement has an international perspective: the models and principles advocated are adaptable anywhere in the world. Also, it is designed to have as much relevance to a small or medium-sized enterprise as to a multinational. The book outlines the history and future of Corporate Community Involvement,
explaining the business context and why companies need to manage their programs strategically. It also distin-

guishes between the growing lexicon of terminologies and provides clear definitions of terms such as "philanthropy", "sponsorship", "Corporate Citizenship", "Corporate Responsibility" and "Sustainability", advising when they are appropriate and how each can add value to corporate activities. This will be an indispensable resource for those working at the interface between business and the community. New or developing practitioners will learn from both the successes and failures of those before them. Representatives from other sectors, notably government, international agencies, NGOs, and academia, will come to understand companies’ internal requirements for cross-sector collaboration programs in the community better.
