Antiphospholipid Syndrome during pregnancy: the state of Evidence-based management of recurrent miscarriages

Evidence-based management of recurrent miscarriages

Nov 20, 2015 · Introduction. Improving pregnancy outcomes is essential to the promotion of human health. Approximately 3% of the population are affected by recurrent miscarriage, and of these, 50% of cases are idiopathic (Li et al., 2002). Alleviating of the burden of diseases caused by preterm birth (PTB; live delivery before 37 weeks gestation) remains one of the greatest public health ...

Evidence-based management of recurrent miscarriages

Aug 23, 2021 · PKD may also be symptom-free until such time as the formation of cysts causes structural damage to the kidney. In addition to flank pain, usually bilateral, PKD may cause progressively worsening symptoms, including headaches, high blood pressure, hematuria, abdominal pain and swelling, recurrent kidney stones, recurrent UTI, and renal failure.

American Urological Association

Ideally, women with pre-existing diabetes should have renal function tests performed in the three months prior to pregnancy, or if not, early in pregnancy at the first point of contact with the clinician. A protein:creatinine level of 30 mg/mmol reflects a daily protein excretion of 300 mg and is the recommended test for the presence of ...
