Three Approaches to Qualitative Research through the ARts

Zofia Kulik's rich artistic career has a dual nature. Between 1970 and 1987, she worked alongside Przemysław Kwiek as a member of the duo KwieKulik, after which she began to develop a successful individual career. While KwieKulik's work has been well established as central to the East European neo-avant-garde art lexicon of the 1970's and '80s, Kulik's solo work has yet to be examined in depth. The first publication devoted solely to her work, this monograph analyzes the themes of her rich and complex oeuvre, addressing the (post)communist condition, artistic labor, intermediality, and the conditions of working as a female artist. The book forms a portrait of Kulik as an artist whose work is both deeply focused and rich in variations that reflect the socio-political shifts in her native Poland. With contributions from leading art historians, including Edit András, Angela Dimitrakaki, Ewa Lajer-Burcharth, Suzana Milevska, and Tomasz Załuski.

Dance on Its Own Terms
As a research methodology, walking has a diverse and extensive history in the social sciences and humanities, underscoring its value for conducting research that is situated, relational, and material. Building on the importance of place, sensory inquiry, embodiment, and rhythm within walking research, this book offers four new concepts for walking methodologies that are accountable to an ethics and politics of the more-than-human: Land and geos, affect, transmaterial and movement. The book carefully considers the more-than-human dimensions of walking methodologies by engaging with feminist new materialisms, posthumanisms, affect theory, trans and queer theory, Indigenous theories, and critical race and disability scholarship. These more-than-human theories rub frictionally against the history of walking scholarship and offer crucial insights into the potential of walking as a qualitative research methodology in a more-than-human world. Theoretically innovative, the book is grounded in examples of walking research by WalkingLab, an international research network on walking (www.walkinglab.org). The book is rich in scope, engaging with a wide range of walking methods and forms including: long walks on hiking trails, geological walks, sensory walks, sonic art walks, processions, orienteering races, protest and activist walks, walking tours, dérives, peripatetic mapping, school-based walking projects, and propositional walks. The chapters draw on WalkingLab’s research-creation events to examine walking in relation to settler colonialism, affective labour, transspecies, participation, racial geographies and counter-cartographies, youth literacy, environmental education, and collaborative writing. The book outlines how more-than-human theories can influence and shape walking methodologies and provokes a critical mode of walking-with that engenders solidarity, accountability, and response-ability. This volume will appeal to graduate students, artists, and academics and researchers who are interested in Education, Cultural Studies, Queer Studies, Affect Studies, Geography, Anthropology, and (Post)Qualitative Research Methods.

Research-based Theatre: An Artistic Methodology

This book surveys the main methodologies used in artistic analysis: formal analysis, iconology and iconography, Marxism, feminism, biography and autobiography, semiotics (structuralism, post-structuralism, and deconstruction), and psychoanalysis. Various works of art are considered from the different methodologies discussed. There are 70 black-and-white illustrations integrated with the text, 4 plates in color, notes, a bibliography, and an index.

Arts Based Research

Hysteria is alive and well in our present time and is apparently spreading contagiously: especially the second decade of the twenty-first century has displayed an ever-increasing interest in the term. A quick Google search opens the gates to sheer endless swathes of
discussions on hysteria, covering almost every aspect of public discourses. The arts—as it is often in such cases—seem conspicuously involved in and engaged with this hysterical discourse. Surprisingly, while the strong academic interest in hysteria throughout the twentieth century and most prominently at the turn of the century is well known and much discussed, the study of how these discourses have continued well into twenty-first-century art practices, is largely pressing on a blind spot. It is the aim of this volume to illustrate how hysteria was already well established within the arts alongside and at times even separately from the much-covered medical studies, and reveal how those current artistic practices very much continue a century spanning cross-fertilization between hysteria and the arts.

**Fandom as Methodology**

Knowings and Knots presents a range of interdisciplinary perspectives on the methodology of research-creation and asks how those who make knowledge think about and value it. Not just a method but a site of ongoing experimentation around what counts as knowledge, research-creation is a meeting place of academia, artistic creation, and the wider public. The contributors argue that academic institutions and funders must recognize research-creation as innovative knowledge-making that leaps over the traditional splitting of theory from practice while considering how gender/feminist studies, Indigenous practices, and new materialism might inform and develop the conversation. Through this book, readers can transform the way they experience both art and education. Contributors: Carolina Cambre, Owen Chapman, Paul Couillard, T.L. Cowan, John Cussans, Randy Lee Cutler, Petra Hroch, Rachelle Viader Knowles, Natalie Loveless, Glen Lowry, Erin Manning, Sourayan Mookerjea, Natasha Myers, Simon Pope, Stephanie Springgay, Sarah E. Truman

**The Methodologies of Art**

Research Methodology in Arts, Science and Humanities examines various aspects of research methodologies required in the field of arts, science and humanities. The book is divided into three different parts where the first part is dedicated towards the research methodologies used in the field of arts, following with the methodologies used in the field of science and humanities as part II and Part III respectively. Provides the reader with the insights into the three different field and the methodologies required to know more about the three.

**The Methodologies of Art**

"The genealogy of racism dates back to 610 AD when Islamic jihadists invented whiteness as a religious justification for deracinating and enslaving African people out of East African and into Southeastern
Europe for more than 1,300 years. Through a new interdisciplinary research methodology, Ancestorology, a taxonomy of Western cultural and visual productions of history are juxtaposed with the social stratifications of the African Diaspora to arrive at a new interpretation of the historical narrative. Decolonizing Arts-Based Methodologies: Researching the African Diaspora provokes critical analytical thought between the historical narrative and current public discourse in Western societies where people of African descent exist. The importance of this work begins the process of unlearning Western ways of knowing and seeing through hegemonic productions of knowledge and by assigning new values to humanity's collective memory"--

**Artistic Research Methodology**

**The Research Mission of the University**

Enter the world of vibration trading with a new methodology for making more money, more safely. What if you could enter the markets and know, in advance, the exact value of trades needed to sustain a losing streak, by knowing their Martingale limits, to finally ensure a win? With Vibratrading you can. Applying the principles of "Boundedness" in conjunction with powerful stock/ETF diversification techniques, VibratradingTM allows you to accomplish what most traders and investors previously thought impossible, giving you an unfair advantage in any market situation. A new and revolutionary perspective on trading and investing, Vibratrading provides a powerful methodology for extracting profit. Non-directional, it is designed to appeal greatly to the vast number of directional traders consistently struggling to keep from losing their trading accounts. Providing a better, safer way to participate in the markets to make consistent profits, it is the only book you need to gain a crucial competitive edge. Presents a radical new trading strategy, VibratradingTM, that the market cannot move adversely against. Demonstrates how a scale trader can enter the market at any level, without being restricted to entry at the "conventional lower end" of the instrument's historical range. Teaches traders and investors the important techniques of securitizing and monetizing profits with emphasis on risk free vibrational share accumulation. Presenting a truly non-directional methodology, Vibratrading is the book you need to make more money, more safely.

**The Training Measurement Book**

This book addresses one of the most difficult challenges in corporate learning and development: the topic of measurement. This proven process focuses on identifying pragmatic, actionable, specific best practices, processes and methodologies, which will be useful to most
organizations. The book includes objective, research-based findings in best practices, which offer organizations practical solutions to training measurement. The author also includes advice and opinions based on assessment of approaches that were not successful and many cause challenges.

Getting to the Bottom of Top

Feminist Speculations and the Practice of Research-Creation provides a unique introduction to research-creation as a methodology, and a series of exemplifications of research-creation projects in practice with a range of participants including secondary school students, artists, and academics. In conversation with leading scholars in the field, the book outlines research-creation as transdisciplinary praxis embedded in queer-feminist anti-racist politics. It provides a methodological overview of how the author approaches research-creation projects at the intersection of literary arts, textuality, artistic practice, and pedagogies of writing, drawing on concepts related to the feminist materialisms, including speculative thought, affect theories, queer theory, and process philosophy. Further, it troubles representationalism in qualitative research in the arts. The book demonstrates how research-creation operates through the making of or curating of art or cultural productions as an integral part of the research process. The exemplification chapters engage with the author’s research-creation events with diverse participants all focused on text-based artistic projects including narratives, inter-textual marginalia art, postcards, songs, and computer-generated scripts. The book is aimed at graduate students and early career researchers who mobilize the literary arts, theory, and research in transdisciplinary settings.

The Profitable Art and Science of Vibratrading

This laboratory guide represents a growing collection of tried, tested and optimized laboratory protocols for the isolation and characterization of eukaryotic RNA, with lesser emphasis on the characterization of prokaryotic transcripts. Collectively the chapters work together to embellish the RNA story, each presenting clear take-home lessons, liberally incorporating flow charts, tables and graphs to facilitate learning and assist in the planning and implementation phases of a project. RNA Methodologies, 3rd edition includes approximately 30% new material, including chapters on the more recent technologies of RNA interference including: RNAi; Microarrays; Bioinformatics. It also includes new sections on: new and improved RT-PCR techniques; innovative 5’ and 3’ RACE techniques; subtractive PCR methods; methods for improving cDNA synthesis. * Author is a well-recognized expert in the field of RNA experimentation and founded Exon-Intron, a well-known biotechnology educational workshop center * Includes classic and contemporary techniques * Incorporates flow charts, tables, and graphs to
facilitate learning and assist in the planning phases of projects

**RNA Methodologies**

Research-based Theatre aims to present research in a way that is compelling and captivating, connecting with viewers on imaginative and intellectual levels at the same time. The editors bring together scholars and practitioners of research-based theatre to construct a theoretical analysis of the field and offer critical reflections on how the methodology can now be applied. It shares twelve examples of contemporary research-based theatre scripts and commentaries from an international group of artists and researchers, selected with an eye toward representing different approaches that come from a variety of Disciplinary areas.

**Marxism and the Methodologies of History**

The methodologies of aesthetic thought have always had a deep, historic foundation and serve as a staple of philosophy. Researchers have begun re-examining the structure and levels of aesthetics by tracing the history of this practice and studying European and Asian traditions. This systematic perspective is an emerging topic of exploration yet requires an appropriate level of research that further investigates the recent discoveries of systemic aesthetics in today’s modern world. New Aesthetic Thought, Methodology, and Structure of Systemic Philosophy is an essential reference source that discusses the organic connection between philosophy, mathematics, and aesthetics, as well as its application to other fields of human sciences. This book analyzes the history of aesthetics and studies the contemporary laws and function of beauty and nature. Featuring research on topics such as fundamental principles, mathematical methods, and humanistic logic, this book is ideally designed for philosophers, physicians, scientific researchers, mathematicians, systems engineers, complexity professionals, anthropologists, art designers, academicians, and students seeking coverage on the structure of artistic beauty through a systematic approach.

**Walking Methodologies in a More-than-human World**

The field of Sound Studies has changed and developed dramatically over the last two decades involving a vast and dizzying array of work produced by those working in the arts, social sciences and sciences. The study of sound is inherently interdisciplinary and is undertaken both by those who specialize in sound and by others who wish to include sound as an intrinsic and indispensable element in their research. This is the first resource to provide a wide ranging, cross-cultural and interdisciplinary investigation and analysis of the ways in which researchers use a broad range of methodologies in order to
pursue their sonic investigations. It brings together 49 specially commissioned chapters that ask a wide range of questions including; how can sound be used in current academic disciplines? Is sound as a methodological tool indispensable for Sound Studies and what can sound artists contribute to the discourse on methodology in Sound Studies? The editors also present 3 original chapters that work as provocative 'sonic methodological interventions' prefacing the 3 sections of the book.

**Contemporary Arts as Political Practice in Singapore**

Gillian Rose introduces the general themes and recent debates on the meaning of culture and the function of the visual in this introduction to interpreting the visual.

**The Methodologies Of Art**

Since the 19th century, when art history became an established academic discipline, works of art have been “read” in a variety of ways. These different ways of describing and interpreting art are the methodologies of artistic analysis, the divining rods of meaning. Regardless of a work’s perceived difficulty, an art object is, in theory, complex. Every work of art is an expression of its culture (time and place) and its maker (the artist) and is dependent on its media (what it’s made of). The methodologies discussed here—formal analysis, iconology and iconography, Marxism, feminism, biography and autobiography, psychoanalysis, and structuralism—reflect the multiplicity of meanings in an artistic image.

**Non-Representational Methodologies**

A stunning collection of cutting-edge essays which brings together the leading scholars in visual research. Clearly structured, and written in an engaging and accessible style throughout, this invigorating work will be the 'must have' text for teachers and students of 'the visual' across the arts, humanities and social sciences. - Elaine Campbell, Reader in Criminology, Newcastle University This is a book about research that takes the challenge of the internet seriously, that rises above disciplinary difference and points to new directions for social research. - Rob Walker, Emeritus Professor, University of East Anglia This innovative book examines and introduces cutting edge visual methods in social research. It explores the development of visual methodology as a field of interdisciplinary and post-disciplinary practice spanning scholarly and applied concerns. Positioned at the innovative edge of theory and practice in contemporary visual research, Pink's engaging book goes beyond the methods, ideas and fields of practice outlined in existing texts and handbooks. This book examines: -How new theoretical and methodological engagements are developing and emerging in research
practice; -the impact new approaches are having on the types of knowledge visual research produces and critiques; -the ways visual research intersects with new media; -and the implications for social and cultural research, scholarship and intervention. This book will be essential reading for any student or researcher thinking of using visual methods in their own research. Sarah Pink is Professor of Social Sciences at Loughborough University.

**Feminist Speculations and the Practice of Research-Creation**

Conservation Treatment Methodology presents a systematic approach to decision-making for conservation treatments. The methodology is applicable to all cultural property, independent of object type or material, and its use will enable conservators to be more confident in their treatment decisions. Conservation Treatment Methodology is illustrated with numerous examples that emphasize the equal importance of the physical and cultural aspects of objects for decision-making. The book also explains how the history of an object and the meaning that it holds for its owner or custodian contribute to determining its treatment. Conservation Treatment Methodology is an essential text for conservators, historic preservation specialists, and restorers, as well as students. Since it is not a technical manual about how to carry out treatments, the book will also be of value to art historians and museum personnel who work with conservators. "This book is unique in its overarching, multidisciplinary approach. The writing is not only clear, but entertaining and engaging." Dan Kushel, Distinguished Teaching Professor, Art Conservation Department, Buffalo New York) State College

Barbara Appelbaum is one of the premier objects conservators in the United States and the author of Guide to Environmental Protection of Collections. Practicing in New York, Appelbaum was trained at New York University and began her career at The Brooklyn Museum. The author treats a wide range of object types. Projects of note have included George Washington’s leather portfolio, a Marcel Duchamp urinal, and a Marilyn Monroe dress.

**Methodologies of Embodiment**

Designed to be used as both a class text and a resource for researchers and practitioners, Arts Based Research provides a framework for those who seek to broaden the domain of qualitative inquiry in the social sciences by incorporating the arts as forms that represent human knowing.

**Decolonizing Arts-based Methodologies**

The bringing together of the arts and qualitative inquiry is changing the face of social science research. The increasing shift toward arts-based research has raised complex questions, such as how to evaluate
its quality and even whether distinctions exist between what is art and what is research. In this defining work, Gary Knowles and Ardra Cole bring together the top scholars in qualitative methods to provide a comprehensive overview of where arts-based research has come, and where it is going. Through various categories of art and art-based research - namely epistemological, historical, methodological, thematic - will address all the significant issues of conceiving and conducting arts-based or arts-informed research in the social sciences and humanities, as well as the challenges of composing final representations of the research.

Hysterical Methodologies in the Arts

This timely collection examines the contemporary arts as political practice, offering critical insight into some of the more controversial talking points that have shaped Singapore's identity as a nation. Focusing on the role played by contemporary arts in shaping Singapore's political landscape as the country celebrated 50 years of independence in 2015, the authors consider how politics is often perceived as that which limits the flourishing of the arts. Contending that all art is political, and that all art form is a form of political practice, this collection examines ways in which the practice of art in Singapore redraws the boundaries that conventionally separate arts from politics. It critically examines the tenuous relationship between the arts and politics and offers a timely reevaluation of the relationship between the arts and politics. In doing so, it opens a dialogue between artistic practice and political practice that reinforces the mutuality of both, rather than their exclusivity, and redefines the concept of the political to demonstrate that political involvement is not a simple matter of partisan politics, but has an inherently aesthetic dimension, and aesthetics an inherently political one.

Design Thinking Methodology Book

Since the nineteenth century, when art history became an established academic discipline, works of art have been 'read' in a variety of ways. These different ways of describing and interpreting art are the methodologies of artistic analysis, the divining rods of meaning. Regardless of a work's perceived difficulty, an art object is, in theory, complex. Every work of art is an expression of its culture (time and place) and its maker (the artist) and is dependent on its media (what it's made of). The methodologies discussed here (formal analysis, iconology and iconography, Marxism, feminism, biography and autobiography, psychoanalysis, structuralism, race and gender) reflect the multiplicity of meanings in an artistic image. The second edition includes nineteen new images, new sections on race, gender, Orientalism, and colonialism, and a new epilogue that analyzes a single painting to illustrate the different methodological viewpoints.
Creating Social Change Through Creativity

Introducing the reader to grounded methodology and its ethical approach, this book explores the theory behind the method as well as how to use it to develop and evaluate learning and education projects. Grounded methodology is designed to challenge traditional educational research methodologies, and in doing so questions the notion of the need for highly formal research in institutional settings. In this respect, it is also a simple way of planning an educational project that needs an evaluative element. Covering data collection techniques used in the course of education research such as observations, interviews, course development, participant diaries and online data collection, this book investigates the practical realities of researching in education contexts and the differences in educational, national and cultural backgrounds. It is ideal reading for students and academics looking to update and increase their knowledge on grounded methodology, especially students who are researchers in final-year undergraduate or post-graduate level programs, or instructors planning to teach grounded theory or grounded methodology to their own emerging research students.

Conservation Treatment Methodology

'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date.

An Introduction to Grounded Methodology for Emerging Educational Researchers

Creative Arts Research: Narratives of Methodologies and Practices is an innovative set of essays that grows out of active engagement with arts practice, pedagogy and research. The collection presents a selection of arts-based research projects, their methodologies, practices and guiding philosophies, and throws new light on a range of issues that bring artists, designers, and performers into
conversation with one another. The collection weaves together theoretical and applied dimensions of creative arts research. Following Martin Heidegger, the lead authors, Elizabeth Grierson and Laura Brearley situate the text through consideration of ways of framing, knowing and being, looking and listening, analysing, being-with, proposing, acting and reflecting, constructing, performing, deconstructing, and learning. Heidegger’s notion of gathering and his proposition, Questioning builds a way the way is one of thinking provides the means to link the different chapters. This wide-ranging metaphoric device allows the authors to emphasise a set of fundamental questions concerning epistemologies, ways of knowing, and ontologies, ways of being, and the relations between the two. Their book opens a conceptual space to recognise the diversity of practices that count as creative arts research. This collection is authentic, it speaks to the reader, it raises many questions and it theorises methodologies and practices of creative arts research in ways that the art student, the teacher, the practitioner, and the lecturer will find philosophical, interesting and methodologically insightful. The collection is to be welcomed as breaking new ground and it will have a deserved readership beyond the confines of the academic art-based community. Michael A. Peters"

**Place in Research**

Bridging environmental and Indigenous studies and drawing on critical geography, spatial theory, new materialist theory, and decolonizing theory, this dynamic volume examines the sometimes overlooked significance of place in social science research. There are often important divergences and even competing logics at work in these areas of research, some which may indeed be incommensurable. This volume explores how researchers around the globe are coming to terms - both theoretically and practically - with place in the context of settler colonialism, globalization, and environmental degradation. Tuck and McKenzie outline a trajectory of critical place inquiry that not only furthers empirical knowledge, but ethically imagines new possibilities for collaboration and action. Critical place inquiry can involve a range of research methodologies; this volume argues that what matters is how the chosen methodology engages conceptually with place in order to mobilize methods that enable data collection and analyses that address place explicitly and politically. Unlike other approaches that attempt to superficially tag on Indigenous concerns, decolonizing conceptualizations of land and place and Indigenous methods are central, not peripheral, to practices of critical place inquiry.

**Zofia Kulik**

An illustrated exploration of fandom that combines academic essays with artist pages and experimental texts. Fandom as Methodology examines fandom as a set of practices for approaching and writing
about art. The collection includes experimental texts, autobiography, fiction, and new academic perspectives on fandom in and as art. Key to the idea of “fandom as methodology” is a focus on the potential for fandom in art to create oppositional spaces, communities, and practices, particularly from queer perspectives, but also through transnational, feminist and artist-of-color fandoms. The book provides a range of examples of artists and writers working in this vein, as well as academic essays that explore the ways in which fandom can be theorized as a methodology for art practice and art history. Fandom as Methodology proposes that many artists and art writers already draw on affective strategies found in fandom. With the current focus in many areas of art history, art writing, and performance studies around affective engagement with artworks and imaginative potentials, fandom is a key methodology that has yet to be explored. Interwoven into the academic essays are lavishly designed artist pages in which artists offer an introduction to their use of fandom as methodology. Contributors Taylor J. Acosta, Catherine Grant, Dominic Johnson, Kate Random Love, Maud Lavin, Owen G. Parry, Alice Butler, SooJin Lee, Jenny Lin, Judy Batalion, Ika Willis. Artists featured in the artist pages Jeremy Deller, Ego Ahaiwe Sowinski, Anna Bunting-Branch, Maria Fusco, Cathy Lomax, Kamau Amu Patton, Holly Pester, Dawn Mellor, Michelle Williams Gamaker, The Women of Colour Index Reading Group, Liv Wynter, Zhiyuan Yang

**Research Methodology in Arts, Science and Humanities**

People demand authentic participation in decisions that affect their lives. ToP methods answer that call because they reflect how humans think, growing out of reflective inquiry into what works in real life and the study of phenomenology and existentialism. This book explores the foundational understandings of this body of knowledge and its practice. Getting to the Bottom of ToP works at two levels: as a guide to processes that elicit participation to bring insights to the surface and ensure participants collaborate to bring the resulting plans to fruition and as a theoretical basis drawn from the field of phenomenology—an answer to any of us who have pondered what principles or theory about personal and group change underlie those processes. —Peter J. Taylor, Critical and Creative Thinking Graduate Program, UMass Boston I have longed for decades for this book, a profound and helpful exploration of the phenomenology of practice of ToP. In this breakthrough work, the Nelsons expose the philosophical foundations of the ICA’s ToP methods in ways that scholars and facilitators alike will find useful. By tracing ToP’s ancestry to the existentialist’s insights of Kierkegaard and Sartre and the phenomenological methods of Husserl and Heidegger, this book not only provides conceptual clarity but releases a deep wellspring of motivation and skillfulness for practitioners of ToP. I will definitely use this book in teaching my NYU Wagner grad courses on innovative leadership. —Robertson Work, author of A Compassionate Civilization, NYU Wagner professor, and UN consultant
Research Methods and Methodologies for Art Education

This book explains design thinking methodology that is applied by high-performing enterprises, start-ups and organizations in developing innovative products; technologies; services; business models; marketing ideas; processes; spaces; and solutions for diverse business, social, and everyday challenges. It includes easily applicable design thinking techniques, such as HMW questions, personas, mind mapping, empathy mapping, affinity diagram, value-proposition canvas, storyboard, cause-and-effect diagram, brainstorming, brain dumps, reverse brainstorming, benchmarking, journey map, and prototyping. A real-life case study is used to introduce design thinking methodology and techniques in a more practical way to a broad range of practitioners, including project managers and IT specialists, innovation teams, marketing professionals and brand managers, product managers, designers, consultants, strategic planning experts, C-level executives, and architects. The book explains how artful thinking perspectives can be applied to enhance design thinking skills, such as creativity, thinking out of the box, empathy, visual thinking, observation, asking the right questions, and pattern recognition. It also describes how to apply design thinking and lean and agile methodologies together.

Artistic Mentoring as a Decolonizing Methodology

Three Approaches to Qualitative Research through the ARtS: Narratives of Teaching for Social Justice and Community incorporates aesthetic education into social justice discourses and advances qualitative research strategies through the medium of three theoretical frameworks: phenomenology, critical ethnographic research, and poststructuralist theories.

Multimodality in Writing

Artistic Research Methodology argues for artistic research as a context-aware and historical process that works inside-in, beginning and ending with acts committed within an artistic practice. An artistic researcher has three intertwined tasks. First, she needs to develop and perfect her own artistic skills, vision and conceptual thinking. This happens by developing a vocabulary for not only making but also writing and speaking about art. Second, an artistic researcher has to contribute to academia and the invisible colleges around the world by proposing an argument in the form of a thesis, a narrative; and in so doing helping to build a community of artistic research and the bodies of knowledge these communities rely on. Third, she must communicate with practicing artists and the larger public, performing what one could call -audience education-. There is no way of being an engaged and committed partner in a community
without taking sides, without getting entangled in issues of power. Consequently, the methodology of artistic research has to be responsive both to the requirements of the practice and the traditions of science. Here the embedded nature of the knowledge produced through artistic research becomes evident. &ltI&gt;Artistic Research Methodology is essential reading for university courses in art, art education, media and social sciences.&lt;/I&gt;

**Visual Methodologies**

Non-representational theory is one of the contemporary moment’s most influential theoretical perspectives within social and cultural theory. It is now widely considered to be the logical successor of postmodern theory, the logical development of post-structuralist thought, and the most notable intellectual force behind the turn across the social and cultural sciences away from cognition, meaning, and textuality. And yet, it is often poorly understood. This is in part because of its complexity, but also because of its limited treatment in the few volumes chiefly dedicated to it. Theories must be useful to researchers keen on utilizing concepts and analytical frames for their personal interpretive purposes. How useful non-representational theory is, in this sense, is yet to be understood. This book outlines a variety of ways in which non-representational ideas can influence the research process, the very value of empirical research, the nature of data, the political value of data and evidence, the methods of research, the very notion of method, and the styles, genres, and media of research.

**Visual Methodologies**

Comprehensively revised and updated the Second Edition of the bestselling Visual Methodologies provides a critical introduction to the study and interpretation of visual culture. The Second Edition contains: - a completely new chapter on how to use the book - each chapter follows the same structure, making comparisons between methods easier - three extra chapters, each discussing a method not covered in the First Edition

**Handbook of the Arts in Qualitative Research**

**Advances in Visual Methodology**

This book examines research using anti-oppressive, arts-based methods to promote social change in oppressed and marginalized communities. The contributors discuss literary techniques, performance, visual art, and new media in relation to the co-construction of knowledge and positionality, reflexivity, data representation, community building and engagement, and pedagogy. The contributors to this
volume hail from a wide array of disciplines, including sociology, social work, community psychology, anthropology, performing arts, education, medicine, and public health.

New Aesthetic Thought, Methodology, and Structure of Systemic Philosophy

This volume is dedicated to exploring and exposing the challenges, the possibilities, and the processes of empirical work in embodiment. Grounded in qualitative inquiry in the humanities and social sciences, the chapters describe perspectives and contexts of embodied research, but focus on the methodologies, methods, and analytic frames taken up to grapple with this ever-more theorised aspect of qualitative inquiry. The authors drawn together in this volume share an investment in the ways in which the body inscribes and is inscribed within research that foregrounds the cultural, social, affective, and political discourses that are at the core of how bodies act and are acted upon.

Knowings and Knots

Dance on its Own Terms: Histories and Methodologies anthologizes a wide range of subjects examined from dance-centered methodologies: modes of research that are emergent, based in relevant systems of movement analysis, use primary sources, and rely on critical, informed observation of movement. The anthology fills a gap in current scholarship by emphasizing dance history and core disciplinary knowledge rather than theories imported from disciplines outside dance. Individual chapters serve as case studies that are further organized into three categories of significant dance activity: performance and reconstruction, pedagogy and choreographic process, and notational and other written forms that analyze and document dance. The breadth of the content reflects the richness and vibrancy of the dance field; each deeply informed examination serves as a window opening onto the larger world of dance. Conceptually, each chapter also raises concerns and questions that point to broadly inclusive methodological applications. Engaging and insightful, Dance on its Own Terms represents a major contribution to research on dance.

The Bloomsbury Handbook of Sonic Methodologies

"To expand the possibilities of "doing arts thinking" from a non-Eurocentric view, Artistic Mentoring as a Decolonizing Methodology: A Collaborative Painting Ethnography with Maya Artists Pedro Rafael González Chavajay and Paula Nicho Cúmez is grounded in Indigenous perspectives on arts practice, arts research, and art education. Mentored in painting for eighteen years by two Guatemalan Maya artists, Kryssi Staikidis, a North American painter and art education
professor, uses both Indigenous and decolonizing methodologies, which involve respectful collaboration, and continuously reexamines her positions as student, artist, and ethnographer searching to redefine and transform the roles of the artist as mentor, historian/activist, ethnographer, and teacher. The primary purpose of the book is to illuminate the Maya artists as mentors, the collaborative and holistic processes underlying their painting, and the teaching and insights from their studios. These include Imagined Realism, a process excluding rendering from observation, and the fusion of pedagogy and curriculum into a holistic paradigm of decentralized teaching, negotiated curriculum, personal and cultural narrative as thematic content, and the surrounding visual culture and community as text. The Maya artist as cultural historian creates paintings as platforms of protest and vehicles of cultural transmission, for example, genocide witnessed in paintings as historical evidence. The mentored artist as ethnographer cedes the traditional ethnographic authority of the colonizing stance to the Indigenous expert as partner and mentor, and under this mentorship analyzes its possibilities as decolonizing arts-based qualitative inquiry. For the teacher, Maya world views broaden and integrate arts practice and arts research, inaugurating possibilities to transform arts education"--

**Decolonizing Methodologies**

This volume offers the readers a diversity of insight into how multimodality works in texts, and the effects different modes have on generating and understanding meaning.
